**· Protection of hands:**

Protective gloves

The glove material has to be impermeable and resistant to the product/ the substance/ the preparation.  
Due to missing tests no recommendation to the glove material can be given for the product/ the preparation/ the chemical mixture.

Selection of the glove material on consideration of the penetration times, rates of diffusion and the degradation

**· Material of gloves**

The selection of the suitable gloves does not only depend on the material, but also on further marks of quality and varies from manufacturer to manufacturer. As the product is a preparation of several substances, the resistance of the glove material can not be calculated in advance and has therefore to be checked prior to the application.

**· Penetration time of glove material**

The exact break through time has to be found out by the manufacturer of the protective gloves and has to be observed.

**· Eye protection:**

Tightly sealed goggles

**Other informations:** When cement reacts with water (for instance when making concrete or mortar) or becomes damp, a strong alkaline solution is produced. Due to its high alkalinity, damp cement may cause skin and eye irritation or burns. Because it contains soluble chromium (VI), it may cause an allergic reaction in individuals. A reducing agent for hexavalent chromium (Cr (VI)) under the limit of 0.0002% is added to cement if necessary.
